

Here are the direct, official documentation links for each of the industry targets listed in your framework categories, formatted to be viewed instantly:

1. Lifecycle Logic (Short-Lived / Just-In-Time Tokens)

-
- **Azure Entra ID:** View the [Microsoft Entra Continuous Access Evaluation \(CAE\) Guide](#) to inspect real-time token revoking mechanisms. For edge deployments, check the [Application Proxy CAE Documentation](#). [1, 2]
- **AWS IAM Identity Center / STS:** Read the [AWS STS AssumeRole API Reference](#) to see how temporary, cryptographically bound session credentials are minted. [3]
-

2. Metadata-Driven Routing (Tools / Function Calling)

-
- **OpenAI:** Review the [OpenAI Function Calling Guide](#) to analyze how routing states navigate the application layer.
- **Anthropic:** Review the [Claude Platform Tool Use Overview](#) to track model-driven execution states. For context-saving mechanics, see the [Advanced Tool Use Framework](#). [4, 5, 6]
-

3. Identity and Cross-Platform Architectures

-
- **Enterprise Integrations:** Review the architectural mappings on how cross-domain configurations operate by reading the [Microsoft Entra Security Reference for AWS](#). [7]
-

If you need any specific API schemas or code samples pulled directly from these specific source guides to match against your repositories, let me know.
